

Customized training programs based on the type of work your workers do.

Falls are the #1 cause of death in the construction industry and consistently the most commonly cited OSHA standard. Lack of proper safety training is currently #9 on the list of common OSHA violations.

OSHA regulations state that the employer shall provide a training program for each employee who might be exposed to fall hazards. Even

without injury or death, OSHA can impose a \$7,000 fine for untrained workers. Make sure your facility is taking proper measures to mitigate the risk of injury and citations!

Conney Safety provides customizable **Fall Protection Training for Construction** based on your company's unique needs.

Our training is conducted by a Competent Person and can cover any combination of the following:

- · Nature of fall hazards in the work area
- · Use and operation of personal fall arrest systems being used (or other protective systems)
- · Review and/or development of fall protection plans
- Identifying fall clearance requirements and how they pertain to where employees will be working
- · Equipment inspection procedures
- · Discussion of rescue plans
- Other topics as needed (certificates provided)

Competent Person Training

Beyond what is covered in the General Awareness Training, more attention is given towards identifying suitable anchor points and determining the optimum fall protection system for the application. Greater emphasis is placed on conducting and documenting the required annual fall protection equipment inspections. Training generally runs from 1.5 to 4 hours.

General Awareness Training

Provided for most field workers to cover the basics of fall protection principles listed above. Depending on the nature of the work activities, this training generally runs from 45 minutes to 1.5 hours.
