

Solutions for large-group testing

Schools, sports teams, large facilities, military bases. As sizable organizations like these start to see increased activity, there's a need for increased COVID-19 testing, too. But with it comes the need for a plan that manages large-group testing on-site in a safe and seamless manner.

Brady knows that every sample is a person you want to help keep safe. As you up your testing, up your confidence with customized solutions, including printing systems, materials, software solutions and more, that can meet the needs of your organization, including:

- Touchless printing
- On-demand ID labels
- Scanners / barcoded samples
- Long-term traceability for collection and testing

And, look at these real-world solutions that Brady offers organizations like yours:

A touchless printing solution

Need: Give students a way to test themselves in a touchless manner

Where: A large university

Solution: Students first log into their university account to find the nearest testing site with a Brady M611 printer. Then, they swab themselves and put their sample into a pre-labeled tube with a barcode, which they scan. This triggers a printed label identifying the sample, which they then drop off at an on-campus collection site.

Complete traceability

Need: A seamless method for getting existing data easily onto labels

Where: A military base

Solution: Great for lab conditions and ID on vials, centrifuge tubes and test tubes, Brady recommended a printer and material combo, the BradyPrinter i7100 Industrial Label Printer and B-7425 label material. The base then used custom scripting from app engineering for Brady Workstation software, and imported existing data from their database directly to labels, which they printed and attached to samples.

Testing without printing

Need: Traceable samples with custom information

Where: A large university

Solution: The university began their goal of 100% traceability by purchasing 100-200 scanners. Then, they used app engineering and Brady pre-printed B-7425 labels with custom serialization to label each sample.
